(54) Title: NOVEL ANTIFUNGAL CYCLOHEXAPEPTIDES

(I)

(57) Abstract

The present invention is directed to novel carba cyclohexapeptide compounds of formula (I), (SEQ ID NOS. 1-6), where all substituents are defined herein, which are useful as antifungal agents and for the treatment of *Pneumocystis carinii* infections. Compositions containing the compounds of the invention are also disclosed.

TITLE OF THE INVENTION

NOVEL ANTIFUNGAL CYCLOHEXAPEPTIDES

BACKGROUND OF THE INVENTION

5 The present invention is directed to novel cyclohexapeptide compounds which are useful as antifungal and anti-Pneumocystis agents.

 There presently exists a need for antifungal and anti-Pneumocystis agents due to an increase in the number of isolates which are resistant to conventional agents. Additionally, conventional agents
10 show somewhat high levels of toxicity which limit their usefulness. Lastly, the incidence of *Pneumocystis carinii* pneumonia is increasing, particularly in view of the high incidence of immuno-compromised patients susceptible to infection, such as those suffering from AIDS.

15 SUMMARY OF THE INVENTION

 The compounds of the present invention, Compound I (Seq. ID Nos. 1-6) , are characterized in having a carbon attached to the cyclohexapeptide ring at the 5-carbon of the 4-hydroxyornithine component (hereinafter "C-5-orn") and may be represented by the
20 formula:

25

30

- 2 -

5

10

15

wherein

R^I is H or OH;

20

R² is H, CH₃ or OH;

R³ is H, CH₃, CH₂CONH₂, CH₂CN, CH₂CH₂NR^{II}R^{III},
CH₂CH₂N(R^{IV})₃⁺X⁻ or CH₂CH₂NH(C = NH)R^{VII};

25

R⁴ is H or CH₃;R⁵ is H, OH or OSO₃H;

30

R⁶ is H or OH;

R^I is C₉-C₂₁ alkyl,
C₉-C₂₁ alkenyl,
C₁-C₁₀ alkoxyphenyl,
C₁-C₁₀ alkoxynaphthyl, or

- 3 -

5 wherein
 Ra is

C₁-C₁₀ alkyl; or (CH₂)_qNR^bR^c wherein R^b and R^c are independently H, C₁-C₁₀ alkyl or R^b and R^c taken together with the nitrogen atom are

10

wherein
 Rd is

15

p is
 q is

C₁-C₁₆ alkyl, cyclohexylmethyl, phenyl or benzyl;
 1 or 2; and
 2, 3 or 4;

R^{II} is

20

H, C₁-C₄ alkyl, (CH₂)₂₋₄OH, C=NH(R^{VII}),
 (CH₂)₂₋₄NR^{VI}, (CH₂)₂₋₄N(R^{IV})₃⁺X⁻,
 (CH₂)₂₋₄NH(C=NH)R^{VII},
 (CH₂)₁₋₄CH(NR^{VI})(CH₂)₁₋₄NR^{VI},
 (CH₂)₂₋₄NR^V(CH₂)₂₋₄NR^{VI},
 CO(CH₂)₁₋₄NR^{VI}, COCH(NR^{VI})(CH₂)₁₋₄NR^{VI};

25

R^{III} is

H, C₁-C₄ alkyl, (CH₂)₂₋₄NR^{VI}, (CH₂)₂₋₄N(R^{IV})₃⁺X⁻,
 (CH₂)₂₋₄NH(C=NH)R^{VII},
 (CH₂)₁₋₄CH(NR^{VI})(CH₂)₁₋₄NR^{VI},
 (CH₂)₂₋₄NR^V(CH₂)₂₋₄NR^{VI}; or

30

R^{II} and R^{III} taken together are

-(CH₂)₄-, -(CH₂)₅-, -(CH₂)₂O(CH₂)₂-, or
 -(CH₂)₂NH(CH₂)₂-;

- 4 -

R^{IV} is C₁-C₄ alkyl;

R^V is H or C₁-C₄ alkyl;

5

R^{VI} is H or C₁-C₄ alkyl;

R^{VII} is H, C₁-C₄ alkyl or NH₂;

10

X is Cl, Br or I; or

a pharmaceutically acceptable salt thereof.

15 Additionally, there are disclosed quaternary ammonium salts of the formula

20

25

30

- 5 -

where R_1 , R_2 , R_3 , R_4 , R_5 , R_6 , R^I , R^{IV} and X are as previously defined.

There are also disclosed compounds of the formula

wherein

R_1 is H or OH;

25 R_2 is H, CH_3 or OH;

R_3 is H, CH_3 , CH_2CONH_2 , CH_2CN , $CH_2CH_2NR^II R^{III}$, $CH_2CH_2N(R^{IV})_3^+ X^-$ or $CH_2CH_2NH(C=NH)R^{VII}$;

30 R_4 is H or CH_3 ;

R_5 is H, OH or OSO_3H ;

R_6 is H or OH;

- 6 -

- 5 R^{II} is H, C₁-C₄ alkyl, (CH₂)₂₋₄OH, C=NH(R^{VII}),
(CH₂)₂₋₄NR^{VI}, (CH₂)₂₋₄N(R^{IV})₃⁺X⁻,
(CH₂)₂₋₄NH(C=NH)R^{VII},
(CH₂)₁₋₄CH(NR^{VI})(CH₂)₁₋₄NR^{VI},
(CH₂)₂₋₄NR^V(CH₂)₂₋₄NR^{VI},
CO(CH₂)₁₋₄NR^{VI}, COCH(NR^{VI})(CH₂)₁₋₄NR^{VI};
- 10 R^{III} is H, C₁-C₄ alkyl, (CH₂)₂₋₄NR^{VI}, (CH₂)₂₋₄N(R^{IV})₃⁺X⁻,
(CH₂)₂₋₄NH(C=NH)R^{VII},
(CH₂)₁₋₄CH(NR^{VI})(CH₂)₁₋₄NR^{VI},
(CH₂)₂₋₄NR^V(CH₂)₂₋₄NR^{VI}; or
- 15 R^{II} and R^{III} taken together are
-(CH₂)₄-, -(CH₂)₅-, -(CH₂)₂O(CH₂)₂-, or
-(CH₂)₂NH(CH₂)₂-;
- R^{IV} is C₁-C₄ alkyl;
- 20 R^V is H or C₁-C₄ alkyl;
- R^{VI} is H or C₁-C₄ alkyl;
- 25 R^{VII} is H, C₁-C₄ alkyl or NH₂;
- X is Cl, Br or I; or

30 a pharmaceutically acceptable salt thereof, which are useful for the
preparation of Compounds I and II of the invention.

Preferred embodiments of the invention are those of
Compound I wherein

- 7 -

R₁ and R₆ are OH
 R₂ and R₅ are H
 R₃ is CH₂CH₂NH₂
 R₄ is CH₃

5

R^I is 9,11-dimethyltridecyl,

10

15

R^{II} is H, CH₂CH₂NH₂, COCH₂NH₂, COCH₂CH₂NH₂ or
 COCH(NH₂)CH₂NH₂, and
 R^{III} is H.

20

The compounds of this invention may be formulated into
 pharmaceutical compositions which are comprised of the compounds of
 formula I or II in combination with a pharmaceutically acceptable
 carrier.

25

The compounds of this invention are useful in treating
 fungal infections such as those caused by *Candida* and *Aspergillus* and
 for the treatment and prevention of infections caused by *Pneumocystis*
carinii. These infections are often found in immunocompromised patients
 such as those suffering with AIDS.

30

Throughout the specification and appended claims, a given
 chemical formula or name shall encompass all optical and stereoisomers
 as well as racemic mixtures where such isomers and mixtures exist.

The term alkyl refers to straight, branched or cyclic chain
 hydrocarbon groups, e.g., methyl, ethyl, n-propyl, isopropyl, n-butyl,
 pentyl, hexyl, heptyl, cyclopentyl, cyclohexyl, cyclohexylmethyl and the
 like.

- 8 -

The term cycloalkyl refers to a species of alkyl containing from 3 to 15 carbon atoms without alternating or resonating double bonds between carbon atoms.

5 The term alkenyl refers to groups such as, e.g., vinyl, 1-propene-2-yl, 1-butene-4-yl, 2-buten-4-yl, 1-pentene-5-yl and the like.

The term alkoxy refer to straight or branched chain oxyalkyl groups such as, e.g., methoxy, ethoxy, butoxy, heptoxy, dodecyloxy, and the like.

10 The compounds of the present invention are generally obtained as mixtures of stereoisomeric forms in which one form usually predominates. Conditions may be adjusted by means within the normal skill of the skilled artisan to obtain predominantly the desired isomer. The compounds with preferred stereoisomeric form designated herein as the "normal" form are those in which the group at the "C-5-orn"
15 position is below the plane at the said position. The designation "epi" has been employed for those compounds in which the group at the "C-5-orn" position is above the plane.

Pharmaceutically acceptable salts suitable as acid addition salts are those from acids such as hydrochloric, hydrobromic,
20 phosphoric, sulfuric, maleic, citric, acetic, tartaric, succinic, oxalic, malic, glutamic and the like, and include other acids related to the pharmaceutically acceptable salts listed in *Journal of Pharmaceutical Science*, 66:2 (1977).

When the acyl substituent at the 2-position on the
25 4-hydroxyornithine nitrogen contains an aromatic chain, it differs from natural products and known compounds. The aromatic chain disclosed contains one to three phenyl groups further extended by substituents in the para position.

Representative nuclei for the derivatives of the present
30 invention (Compounds I & II) and the sequence ID for these compounds may be seen in the following table. Since the peptide nuclei would be the same irrespective of substituents R₁, R₂, R₅, R₆, R^I, R^{II}, or R^{III} and since the sequence identification number is assigned for the nuclear variations, the amines and salts have the same sequence ID's.

- 9 -

	Carba Compound	R ₃	R ₄	SEQ ID NO.
5	I-1	H	CH ₃	1
	I-2	CH ₃	CH ₃	2
	I-3	All Others	CH ₃	3
	I-4	H	H	4
	I-5	CH ₃	H	5
10	I-6	All Others	H	6

The compounds of the present invention are soluble in water, lower alcohols, and polar aprotic solvents such as N,N-dimethylformamide (DMF), dimethyl sulfoxide (DMSO) and pyridine. They are insoluble in solvents such as diethyl ether and acetonitrile.

The compounds of the present invention are useful as an antibiotic, especially as an antifungal agent or as an antiprotozoal agent. As antifungal agents they are useful for the control of both filamentous fungi and yeasts. They are especially adaptable to be employed for the treatment of mycotic infections in mammals, especially those caused by *Candida* species such as *C. albicans*, *C. tropicalis* and *C. pseudotropicalis*, *Cryptococcus* species such as *C. neoformans* and *Aspergillus* species such as *A. fumigatus*, *A. flavus* and *A. niger*. They are also useful for the treatment and/or prevention of *Pneumocystis carinii* pneumonia to which immune-compromised patients are especially susceptible as hereinafter described.

The structural aspect which distinguishes the compounds of the present invention from previously disclosed cyclohexapeptides is the carbon attached to the cyclohexapeptide ring at the 5-carbon of the 4-hydroxyornithine residue.

The most important naturally occurring echinocandins and pneumocandins have a labile C-O bond at the C-5 orn position. Other pneumocandins as disclosed in U.S. Patent No. 5,378,804 issued January 3, 1995 have a labile C-N bond at the C-5 orn. The compounds disclosed herein have a C-C bond at the C-5 orn imparting stability to

- 10 -

the compounds while still retaining potent antifungal and anti-Pneumocystis activity.

The compounds of the present invention may be prepared from cyclohexapeptides having the formula

by a series of reactions in which the oxygen atom at the "C-5-om" (which also may be referred to as the hemiaminal position) is ultimately replaced by carbon. The starting materials may be natural products or modified natural products as subsequently described.

The sequence IDs of the starting materials are listed in the following table:

- 11 -

	Compound	R ₃	R ₄	Starting Material SEQ ID NO.
5	A-1	H	CH ₃	7
	A-2	CH ₃	CH ₃	8
	A-3	All Others	CH ₃	9
	A-4	H	H	10
	A-5	CH ₃	H	11
10	A-6	All Others	H	12

A compound where R₁ is OH, R₂ is H, R₃ is CH₂CONH₂, R₄ is CH₃, R₅ is H and R₆ is OH and R^I is dimethyltridecyl has been identified in the literature as pneumocandin B_O; a similar compound where R₂ is CH₃, has been identified as pneumocandin A_O and a third compound where R₂ is OH and R₆ is H has been identified as pneumocandin C_O (*J. Antibiotics* 45:1855-60, Dec. 1992). A similar compound where R₂ and R₆ are OH and R^I is dimethyltridecyl has been identified as pneumocandin D_O (*J. Antibiotics* 47:755-764, July 1994).

When in the starting compound, R₃ is H, CH₃ or CH₂CONH₂, they may be directly employed. When R₃ is CH₂CN, CH₂CH₂NR^{II}R^{III}, CH₂CH₂N(R^{IV})₃⁺X⁻ or CH₂CH₂NH(C = NH)R^{VII}, the amides must be first converted to CH₂CN or CH₂CH₂NH₂ and then modified.

- 12 -

* The position is the "C-5-orn" or the hemiaminal position.

25

30

- 13 -

20 In Step A, the starting material, Compound A, an alkylthiol or arylthiol and acid are caused to react in an aprotic solvent under anhydrous conditions for time sufficient for reaction to take place with the formation of Compound B (Seq ID Nos. 13-18), listed in the following table. Aminoethanethiol has been found to be especially useful for this step.

25

Compound	R ₃	R ₄	Sulfur
			Intermediate SEQ ID NO.
B-1	H	CH ₃	13
B-2	CH ₃	CH ₃	14
B-3	All Others	CH ₃	15
B-4	H	H	16
B-5	CH ₃	H	17
B-6	All Others	H	18

30

- 14 -

For Step A, suitable acids include strong organic acid and mineral acids. Examples of strong organic acids are camphorsulfonic acid, p-toluenesulfonic acid, trifluoroacetic acid and methanesulfonic acid. Mineral acids include hydrochloric acid and hydrobromic acid. Camphorsulfonic acid is preferred.

Suitable solvents include DMF, DMSO, 1-methyl-2-pyrrolidinone and hexamethyl phosphoric triamide (HMPA). DMF or DMSO is preferred.

The reaction is generally carried out at ambient temperature to 60°C for about 3 hours to about 10 days.

In carrying out the reaction, the cyclohexapeptide compound, the thiol compound and acid are stirred together in a suitable solvent until the reaction is substantially complete. The reaction mixture then is diluted with water and flash chromatographed on reverse phase resins using 10 to 40 percent acetonitrile/water (containing 0.1% trifluoroacetic acid) as eluant. Trifluoroacetic acid may hereinafter be designated "TFA". The fractions containing the desired product may be concentrated and lyophilized and the lyophilized material purified by preparative high performance liquid chromatography (HPLC).

Appropriate columns for HPLC are commercially available columns sold under trademarks or trade names such as "ZORBAX" (DuPont), "DeltaPak" (Waters), "LICHROPREP" RP18 (E. Merck). The specific columns are identified in the working examples.

In Step B, Compound C (Seq ID Nos. 13-18), a sulfone is obtained by the oxidation of Compound B. Suitable oxidizing agents or oxidants include "OXONE" ($\text{KHSO}_5 \cdot \text{KHSO}_4 \cdot \text{K}_2\text{SO}_4$ 2:1:1, Aldrich Chemicals), metachloroperoxybenzoic acid, and peroxyacetic acid. The sequence ID of Compound C is the same as that of Compound B since the atom attached to the hemiaminal carbon is still sulfur. Thus, the sequence IDs of the sulfones are as follows:

- 15 -

	Compound	R3	R4	Sulfone SEQ ID NO.
5	C-1	H	CH3	13
	C-2	CH3	CH3	14
	C-3	All Others	CH3	15
	C-4	H	H	16
	C-5	CH3	H	17
10	C-6	All Others	H	18

The oxidation of the thioether (Compound B) to the sulfone (Compound C) is carried out with about two molar amounts of the oxidant. When one molar amount of oxidant is employed, the product is a sulfoxide which may then be converted to the sulfone. The sulfoxides may be employed as an intermediate in the formation of the nitrile but the sulfone is preferred. A slight excess over the two molar amount of the oxidizing agent is employed.

The reaction is carried out in an aqueous medium, preferably a mixture of acetonitrile and water. About equal amounts are preferred although a range of 1:9 to 9:1 may be employed.

In carrying out the reaction, the oxidant is added to a solution of Compound B (Seq ID Nos. 13-18) in 1:1 acetonitrile/water and the mixture allowed to stand at ambient temperature for time sufficient to complete the reaction to obtain Compound C generally from about 30 minutes to one hour.

After completion of the reaction, the compound is recovered from the reaction mixture by diluting with water and chromatographing. Reverse phase (C18) flash column chromatography is suitable in this purification step. The preferred eluting agent is 30-45 percent acetonitrile/water (0.1% TFA) in 5 percent step gradients. The appropriate fractions are lyophilized to recover the desired sulfone intermediate, Compound C (Seq ID Nos. 13-18). The intermediate tends to be labile, thus the isolation should be carried out as rapidly as

- 16 -

possible. Alternatively, the reaction mixture can be lyophilized and the crude sulfone used as is in the subsequent step.

Compound C may be converted to a compound having a carbon directly attached to the "C-5-om". As seen in the flow diagram, reaction of Compound C with an alkali metal cyanide produces a nitrile at that position (Compound D). The nitrile can subsequently be reacted with sodium borohydride and cobaltous chloride to afford the aminoalkyl substituent which may be converted into a substituted amine as subsequently described. Compound D is an important intermediate for most of the compounds of the present invention. Sequence ID Nos. for Compound D, the nitrile, are listed in the following table:

	Compound	R3	R4	Nitrile
				SEQ ID NO.
15	D-1	H	CH3	19
	D-2	CH3	CH3	20
	D-3	All Others	CH3	21
	D-4	H	H	22
	D-5	CH3	H	23
20	D-6	All Others	H	24

The nitrile may be obtained by adding alkali metal cyanide while stirring at ambient temperature to a solution of the sulfone in an aprotic solvent for time sufficient to complete the reaction with the formation of the cyanide as determined by HPLC analysis. The reaction mixture then may be diluted with water and then chromatographed to separate the desired nitrile (Compound D) from the reaction mixture. Reverse-phase (C18) flash column chromatography using 20-60% acetonitrile/water (0.1% TFA) in 10% step gradients is suitable for this procedure.

The nitrile (Compound D) may then be reduced to a compound having a free amino group (Compound E).

- 17 -

The reduction may be carried out employing either chemical or catalytic reduction. When chemical reduction is employed, hydride or hydride combinations have been found useful.

5 Sodium borohydride with cobaltous chloride in alcoholic solvent has been found to be particularly useful. When this combination of reagents is used, from about 5 to 50 molar equivalents of sodium borohydride and from 2 to 20 molar equivalents of cobaltous chloride are used for each molar amount of the nitrile.

10 Other reducing agents such as Raney nickel, sodium cyanoborohydride, aluminum hydride, diborane, diisobutyl aluminum hydride and the like may also be used. Frequently these reducing agents are used in combination with a Lewis acid such as cobaltous chloride or aluminum chloride as in the present combination of sodium borohydride and cobaltous chloride.

15 Catalytic hydrogenation also may be carried out over a variety of catalysts including palladium on carbon, platinum oxide or rhodium on alumina. Low pressure catalytic reduction over Pd/C as the catalyst is especially preferred.

20 Typical solvents depending on the reagent include alcohols, especially methanol and ethanol; dimethylformamide, pyridine, tetrahydrofuran or other ethers.

Compounds containing a selectively derivatized amine at the C5-orn position in the presence of an amine at R₃ (i.e. R₃ = CH₂CH₂NH₂) may be prepared by initially introducing the C5-orn amine when R₃ = CH₂CONH₂. The C5-orn amine may then be substituted to provide compounds where R^{II} and R^{III} are not H. Finally, the primary amide at R₃ may be converted to an amine following established procedures. Alternatively, the amine of R₃ may be protected as a CBZ derivative prior to reduction of the C5-orn nitrile to an amine.

30 The amine thus obtained may be converted into an acylated amine by conventional means using a CBZ protected amino acid to obtain, after deprotection, Compound I where R^{II} is COCH(NH₂)(CH₂)₁₋₄NH₂ and R^{III} is H.

- 18 -

Compound I where R^{II} and/or R^{III} are alkyl may be prepared using any suitable known procedure for preparing secondary or tertiary amines. When the desired alkyl group on the nitrogen is methyl, the carbon may be introduced by formylating, followed by
5 reduction of the hydroxymethyl group with sodium cyanoborohydride or other reducing agent. Alternatively, alkylation may be carried out by causing an appropriately substituted alkyl halide to react with the amine in an aprotic solvent in the presence of a base.

To prepare compounds in which the R₃ amine (i.e. R₃ =
10 CH₂CH₂NH₂) is selectively derivatized in the presence of an amine at C5-orn, the R₃ amine may be substituted prior to reduction of the nitrile at C5-orn.

The invention also embraces quaternary ammonium salts of formula (II). These may be prepared by treatment of an amine with an
15 alkyl halide and base in a protic or aprotic solvent. A typical procedure would be to add excess methyl iodide to a solution of the amine and sodium bicarbonate in DMF at room temperature. The product may be isolated by diluting with H₂O followed by C18 HPLC.

The invention also embraces acid addition salts. The
20 compound in the normal course of isolation is obtained as an acid addition salt. Generally, it is as a trifluoroacetic acid or acetic acid salt. The salt thus obtained may be dissolved in water and passed through an anion exchange column bearing the desired anion. The eluate containing the desired salt may be concentrated to recover the salt as a
25 solid product.

The compounds of the present invention are water soluble in their protonated or permanently charged quaternary forms. This is an advantage over the neutral, uncharged echinocandins which are not water soluble.

30 The compounds of the present invention are active against many fungi and particularly against *Candida* species. The antifungal properties may be illustrated with the minimum fungicidal concentration (MFC) determination against certain *Candida* organisms

- 19 -

in a microbroth dilution assay carried out in a Yeast Nitrogen Base (DIFCO) medium with 1% dextrose (YNBD).

In a representative assay, compounds were solubilized in 100% dimethyl sulfoxide (DMSO) at an initial concentration of 5 mg/ml. Once dissolved, the drug stock was brought to a concentration of 512 µg/ml by dilution in water such that the final DMSO concentration was about 10 percent. The solution was then dispensed via a multichannel pipetter into the first column of a 96-well plate (each well containing 0.075 ml of YNBD), resulting in a drug concentration of 256 µg/ml. Compounds in the first column were diluted 2-fold across the rows yielding final drug concentration ranging from 256 µg/ml to 0.12 µg/ml.

Four-hour broth cultures of organisms to be tested were adjusted using a spectrophotometer at 600 nm to equal a 0.5 McFarland Standard. This suspension was diluted 1:100 in YNBD to yield a cell concentration of $1-5 \times 10^4$ colony forming units (CFU)/ml. Aliquots of the suspension (0.075 ml) were inoculated into each well of the microtiter plate resulting in a final cell inoculum of $5-25 \times 10^3$ CFU/ml and final drug concentrations ranging from 128 µg/ml to 0.06 µg/ml. Each assay included one row for drug-free control wells and one row for cell-free control wells.

After 24 hours of incubation, the microtiter plates were shaken gently on a shaker to resuspend the cells. The MIC-2000 inoculator was used to transfer a 1.5 microliter sample from each well of the 96-well microtiter plate to a single reservoir inoculum plate containing Sabouraud dextrose agar (SDA). The inoculated SDA plates were incubated for 24 hours at 35°C and then read for minimum fungicidal concentration (MFC). MFC is defined as the lowest concentration of drug showing no growth or less than 4 colonies per spot. Compound I-A where $R_1=OH$, $R_2=H$, $R_3=CH_2CH_2NH_2$, $R_4=CH_3$, $R_5=H$, $R_6=OH$, $R^I=dimethyltridecyl$, $R^{II}=H$ and $R^{III}=H$ as the bishydrochloride salt had the following MFCs (µg/ml):

- 20 -

Candida albicans (MY1055)	<0.06
Candida tropicalis (MY1012)	<0.06
Candida glabrata (MY1381)	0.25

5

The *in vivo* effectiveness of the compounds against fungi may be seen in the following assay.

Growth from an overnight SDA culture of *Candida albicans* MY 1055 was suspended in sterile saline and the cell
10 concentration determined by hemacytometer count and the cell suspension adjusted to 3.75×10^5 cells/ml. Then 0.2 milliliter of this suspension was administered I.V. in the tail vein of mice so that the final inoculum is 7.5×10^4 cells/mouse.

The assay was then carried out by administering aqueous
15 solutions of Compound I-A at various concentrations intraperitoneally (I.P.), twice daily (b.i.d.) for four consecutive days to 18 to 20 gram female DBA/2 mice, which previously had been infected with *Candida albicans* (MY 1055) in the manner described above. Distilled water was administered I.P. to *C. albicans* challenged mice as controls. After
20 seven days, the mice were sacrificed by carbon dioxide gas, paired kidneys were removed aseptically and placed in sterile polyethylene bags containing 5 milliliters of sterile saline. The kidneys were homogenized in the bags, serially diluted in sterile saline and aliquots spread on the surface of SDA plates. The plates were incubated at 35°C
25 for 48 hours and yeast colonies enumerated for determination of colony forming units (CFU) per gram of kidneys. Compound I-A gave greater than 90% reduction of recoverable *Candida* CFUs at 0.02 mg/kg i.p. twice daily for four consecutive days.

The compounds of the present invention are also active against
30 *Aspergillus* species. The *in vivo* effectiveness of the compounds against *Aspergillus* may be seen in the following assay.

Conidia of *Aspergillus fumigatus* MF 5668 were washed from the surface of several (3-4) 3-5 day SDA slant cultures with sterile saline plus 0.01% Tween 20. The conidia suspension was quantitated by

- 21 -

hemacytometer count and adjusted to the appropriate concentration in sterile saline.

Female DBA/2 mice were challenged I.V. with 1.40×10^6 conidia/mouse. Within fifteen minutes after challenge, aqueous solutions of Compound I-A were administered intraperitoneally (I.P.) at various concentrations twice daily (b.i.d.) for a total of five days. The required dose of Compound I-A to increase the 28-day survival rate by at least 50% over untreated controls was 0.02 mg/kg.

A harmful and potentially fatal side reaction of a number of drugs including certain antibiotically active echinocandin compounds is red blood cell lysis. This is not seen in compounds having the present nuclei which is another advantage of the compounds of this invention.

The compounds of the present invention may also be useful for inhibiting or alleviating *Pneumocystis carinii* infections in immune-compromised patients. The efficacy of the compounds of the present invention for therapeutic or anti-infection purposes may be demonstrated in studies on immunosuppressed rats.

Sprague-Dawley rats (weighing approximately 250 grams) were immunosuppressed with dexamethasone in the drinking water (2.0 mg/L) and maintained on a low protein diet for seven weeks to induce the development of *Pneumocystis pneumonia* from a latent infection. Before drug treatment, two rats were sacrificed to confirm the presence of *Pneumocystis carinii* pneumonia (PCP). Five rats (weighing approximately 150 grams) were injected twice daily for four days subcutaneously (sc) with Compound I-A in 0.25 ml of vehicle (distilled water). A vehicle control was also carried out. All animals continued to receive dexamethasone in the drinking water and low protein diet during the treatment period. At the completion of the treatment, all animals were sacrificed, the lungs were removed and processed, and the extent of disease determined by microscopic analysis of stained slides. The prevention or reduction of cysts were seen in slides of the lungs of treated rats when compared with the number of cysts in the lungs of untreated controls or solvent controls. The results of this assay showed

- 22 -

that Compound I-A reduced *P. carinii* cysts in 5 rats by at least 90 percent when dosed at 0.02 mg/kg with all rats surviving.

5 The outstanding properties are most effectively utilized when the compounds are formulated into novel pharmaceutical compositions with a pharmaceutically acceptable carrier according to the conventional pharmaceutical compounding techniques.

The novel compositions contain at least a therapeutic antifungal or antipneumocystis amount of the active compound. Generally, the composition contains at least 1% by weight of Compound
10 I or II. Concentrate compositions suitable for dilutions prior to use may contain 90% or more by weight. The compositions include compositions suitable for oral, topical, parenteral (including intraperitoneal, subcutaneous, intramuscular, and intravenous), nasal, and suppository administration, or insufflation. The compositions may
15 be prepacked by intimately mixing Compound I or II with the components suitable for the medium desired.

Compositions formulated for oral administration may be liquid or solid compositions. For liquid preparation, the therapeutic agent may be formulated with liquid carriers such as water, glycols,
20 oils, alcohols, and the like, and for solid preparations such as capsules and tablets, with solid carriers such as starches, sugars, ethyl cellulose, calcium and sodium carbonate, calcium phosphate, kaolin, talc, lactose, generally with a lubricant such as calcium stearate, together with
25 binders disintegrating agents and the like. Because of their ease in administration, tablets and capsules represent the most advantageous oral dosage form. It is especially advantageous to formulate the compositions in unit dosage form for ease of administration and uniformity of dosage. Compositions in unit dosage form constitute an aspect of the present invention.

30 Compositions may be formulated for injection and may take such forms as suspensions, solutions or emulsions in oily or aqueous vehicles such as 0.85 percent sodium chloride or 5 percent dextrose in water and may contain formulating agents such as suspending, stabilizing and/or dispersing agents. Buffering agents as

- 23 -

well as additives such as saline or glucose may be added to make the solutions isotonic. The compound may also be solubilized in alcohol/propylene glycol or polyethylene glycol for drip intravenous administration. These compositions also may be presented in unit dosage form in ampoules or in multidose containers, preferable with added preservative. Alternatively, the active ingredients may be in powder form for reconstituting with a suitable vehicle prior to administration.

The term "unit dosage form" as used in the specification and claims refers to physically discrete units, each unit containing a predetermined quantity of active ingredient calculated to produce the desired therapeutic effect in association with the pharmaceutical carrier. Examples of such unit dosage forms are tablets, capsules, pills, powder packets, wafers, measured units in ampules or in multidose containers and the like. A unit dosage of the present invention will generally contain from 100 to 200 milligrams of one of the compounds.

When the compound is for antifungal use, any method of administration may be employed. For treating mycotic infections, oral or intravenous administration is usually employed.

When the compound is to be employed for control of *Pneumocystis* infections, it is desirable to directly treat lung and bronchi. For this reason inhalation methods are preferred. For administration by inhalation, the compounds of the present inventions are conveniently delivered in the form of an aerosol spray presentation from pressurized packs or nebulizers. The preferred delivery system for inhalation is a metered dose inhalation (MDI) aerosol, which may be formulated as a suspension or solution of Compound I or II in suitable propellants, such as fluorocarbons or hydrocarbons. Preferred propellants are those which do not damage the ozone layer.

Although the compounds of the present invention may be employed as tablets, capsules, topical compositions, insufflation powders, suppositories and the like, the solubility of the compounds of the present invention in water and aqueous media render them adaptable

- 24 -

for use in injectible formulations and also in liquid compositions suitable for aerosol sprays.

The following examples illustrate the invention but are not to be construed as limiting. All temperatures are in degrees centigrade (°C) unless indicated otherwise.

EXAMPLE 1

Part A: Preparation of Thioether Intermediate

Trifluoroacetic acid (0.4 ml, 5.3 mmol) was added to a solution of

30

- 25 -

15 (22.9 g, 21.1 mmol) and 2-aminoethanethiol hydrochloride (47.9 g, 422 mmol) in 100 ml of anhydrous N,N-dimethylformamide at 60°C. After a period of 4h, the reaction mixture was cooled to room temperature and diluted with 400 ml of H₂O. Filtration of the resulting solution was
 20 followed by pump-injection of the filtrate onto a Waters Delta Pak C18-100Å radial cartridge (47mm x 30 cm) at a rate of 50 ml/min. Elution with 25-30% CH₃CN/H₂O (0.1% CF₃COOH) in one 5% step gradient gave, after lyophilization of the appropriate fractions, 6.5 g of the *nor*-thioether and 6.8 g of the *epi*-thioether as bistrifluoroacetate salts. By
 25 analytical HPLC (Zorbax RX-C18, 40% CH₃CN/H₂O (0.1% CF₃COOH), uv at 210 nm), the thioethers were sufficiently pure (>80%) for conversion to sulfone as described below. Rechromatography of the individual isomers followed by ion exchange on a Bio-Rad AG2-X8 (Cl⁻) column eluting with H₂O provided, after
 30 lyophilization, pure bishydrochlorides as amorphous solids. *Nor*-thioether: ¹H NMR (400 MHz, CD₃OD) δ 1.17 (d, J=6.2 Hz, 3H), 2.9 (m, 2H), 3.06 (t, J=7.2 Hz, 2H), 3.20 (t, J=6.7 Hz, 2H), 4.91 (d, J=5.8 Hz, 2H), 4.99 (d, J=3.4 Hz), 5.27 (d, J=2.1 Hz, 1H), 6.74 (d, J=8.6 Hz, 2H), 7.11 (d, J=8.6 Hz, 2H); FAB-MS (Li) m/z 1117 (MH+Li)⁺. *Epi*-thioether: ¹H NMR (400 MHz, CD₃OD) δ 2.23 (m, 3H), 2.41 (dd, J=7.4

- 26 -

and 13.1 Hz, 1H), 2.92 (m, 2H), 3.11 (m, 2H), 3.06-3.29 (m, 4H), 4.01 (m, 1H), 4.10 (d, J=4.6 Hz, 1H), 4.64 (dd, J=7.2 and 10.9 Hz, 1H), 4.69 (br s, 1H), 4.95 (d, J=3.9 Hz, 1H), 6.76 (d, J=8.6 Hz, 2H), 7.14 (d, J=8.6 Hz, 2H); FAB-MS (Li) m/z 1117 (MH+Li)⁺.

5

Part B: Preparation of Sulfone

To a stirred solution of the *epi*-thioether from Part A (6.5 g, ~70% pure) in 55 ml of 1:1 acetonitrile/water at 25°C was added OXONE[®] (3.1 g). After a period of 15 min, analysis by C18-HPLC showed the conversion to a more polar product to be complete. The reaction mixture was lyophilized to provide the crude sulfone which was used in the subsequent step without purification.

10

Part C: Preparation of Nitrile

A solution of the *epi*-sulfone bistrifluoroacetate from Part B (2.3 g, 73% pure, 1.23 mmol corrected for purity) in 123 ml of 0.5M lithium cyanide in N,N-dimethylformamide was stirred at 25°C for a period of 15 minutes. HPLC analysis [RP-C18, 45% CH₃CN/H₂O (0.1% CF₃COOH)] of the reaction mixture indicated complete conversion to two less polar products. The reaction mixture was diluted with water (400 ml) and the resulting heterogeneous mixture was loaded onto a reverse-phase flash column (C18, 30 g) packed in 20% CH₃CN/H₂O. Elution with H₂O (200 ml) was followed by 20-70% CH₃CN/H₂O (0.1% CF₃COOH) in 10% step-gradients collecting 100 ml at each step. The insoluble cake remaining at the top of the column was removed and dissolved in 70% CH₃CN/H₂O (0.1% CF₃COOH). This solution was combined with the product-containing fractions and lyophilized to give 1.5 g of crude nitriles. Reverse-phase HPLC of this material [C18, 30-45% CH₃CN/H₂O (0.1% CF₃COOH) in 5% step-gradients] gave, after lyophilization of the appropriate fractions, 220 mg (21%) of the *nor*-nitrile and 270 mg (36%) of the *epi*-nitrile as the trifluoroacetate salts. *Nor*-nitrile: ¹H NMR (500MHz, CD₃OD) δ 1.16 (d, J=6.2 Hz, 3H), 1.60 (m, 2H) 1.81 (m, 1H), 2.44 (dd, J=7.0 and 13.0 Hz, 1H), 3.06 (m, 2H), 3.83 (m, 3H), 3.95 (dd, J=3.2 and 11.2 Hz, 1H),

15

20

25

30

- 27 -

4.03 (m, 1H), 4.43 (m, 1H), 4.54 (dd, $J=7.1$ and 11.7 Hz, 1H), 4.60 (dd, $J=3.4$ and 6.2 Hz, 1H), 4.80 (d, $J=2.3$ Hz, 1H), 4.97 (d, $J=3.2$ Hz, 1H), 6.75 (d, $J=8.5$ Hz, 2H), 7.11 (d, $J=8.5$ Hz, 2H); ESI-MS ($M+H$)⁺ = 1060.7. *Epi*-nitrile: ¹H NMR (500MHz, CD₃OD) d 1.23 (d, $J=6.0$ Hz), 2.05 (m, 1H), 2.42 (dd, $J=6.6$ and 13.5 Hz, 1H), 3.10 (t, $J=7.4$ Hz, 2H), 3.76 (m, 3H), 3.94 (dd, $J=3.2$ and 11.2 Hz, 1H), 4.00 (d, $J=5.5$ Hz, 1H), 4.11 (m, 1H), 4.62 (dd, $J=3.9$ and 11.4 Hz, 1H), 4.81 (d, $J=6.9$ Hz, 1H), 4.88 (d, $J=2.8$ Hz, 1H), 6.75 (d, $J=8.5$ Hz, 2H), 7.11 (d, $J=8.5$ Hz, 2H); ESI-MS ($M+H$)⁺ = 1060.7.

EXAMPLE 2

Sodium borohydride (91.2 mg, 2.41 mmol) was added in portions to a solution of CoCl₂·6H₂O (115 mg, 0.482 mmol) and the *nor*-nitrile (Example 1, 283 mg, 0.241 mmol) in MeOH (9 ml). The ensuing exothermic reaction produced a precipitate while evolving copious quantities of hydrogen. HPLC analysis (Zorbax RX-C18, 4.6 mm x 25 cm; 45% CH₃CN/H₂O (0.1% CF₃COOH) at 1.5 ml/min; uv detection at 210 and 277 nm) after 10 minutes indicated 70% conversion to a more

- 28 -

polar product ($t_R=3.0$ min). 2N CF_3COOH (7.8 ml) was added to the reaction mixture and stirring was continued for a period of 30 minutes, resulting in the dissolution of the precipitate. The mixture was diluted with H_2O (40 ml) and then filtered through a packed bed of diatomaceous earth. The filtrate was pump-injected onto a Zorbax RX-C18 HPLC column (21.2 mm x 25 cm) in 30% $\text{CH}_3\text{CN}/\text{H}_2\text{O}$ (0.1% CF_3COOH). Elution with 30-45% $\text{CH}_3\text{CN}/\text{H}_2\text{O}$ (0.1% CF_3COOH) in 5% step-gradients at a flow rate of 10 ml/min followed by lyophilization of the appropriate fractions gave 93 mg of the bisamine as the trifluoroacetate. The bistrifluoroacetate was dissolved in H_2O (10 ml) and the solution loaded onto a Bio-Rad AG2-X8 (Cl^-) polyprep column (2 ml resin bed). Gravity elution with water (3x10ml) followed by lyophilization of the eluate gave 80 mg of the above compound. Yield (corrected) = 34%. ^1H NMR (500MHz, CD_3OD) δ 1.18 (d, $J=6.2$ Hz, 3H), 1.80 (m, 1H) 1.92 - 2.12 (m, 4H), 2.18 - 2.36 (m, 4H), 2.43 (dd, $J=6.5$ and 12.9 Hz, 1H), 3.07 (m, 2H), 3.16 (dd, $J = 5.4$ and 13.2 Hz, 1H), 3.23 (dd, $J = 3.9$ and 13.2 Hz, 1H), 3.80 (m, 3H), 3.99 (dd, $J=3.1$ and 11.1 Hz, 1H), 4.02 - 4.10 (m, 2H), 4.15 (m, 1H), 4.19 (dd, $J = 1.5$ and 8.1 Hz, 1H), 4.51 - 4.65 (m, 4H), 4.97 (d, $J=3.2$ Hz, 1H), 6.75 (d, $J=8.6$ Hz, 2H), 7.11 (d, $J=8.6$ Hz, 2H); ESI-MS m/z 1064.6 ($\text{M}+\text{H}$) $^+$, 532.9 ($\text{M}+\text{H}$) $^{++}$.

25

30

- 29 -

EXAMPLE 3Part A: Preparation of Thioether Intermediate

20 (1S)-(+)-10-Camphorsulfonic acid (2.39 g, 10.3 mmol) was added to a solution of

- 30 -

(11.0 g, 10.3 mmol) and 2-aminoethanethiol hydrochloride (53 g, 467 mmol) in 200 ml of anhydrous N,N-dimethylformamide at 25°C. After a period of 72h, the reaction mixture was diluted with H₂O (400 ml) and loaded onto a reverse-phase flash column (C18, 110 g) packed in 10% CH₃CN/H₂O. Elution with 10-60% CH₃CN/H₂O in 10% step-gradients followed by lyophilization of the product-containing fractions (40-50% CH₃CN/H₂O) gave 8.7 g of impure thioethers. Preparative HPLC of this mixture (Waters Delta Pak C18-100Å radial cartridge, 47mm x 30 cm) eluting with 20-40% CH₃CN/H₂O (0.1% CF₃COOH) at 50 ml/min in 10% step gradients gave, after lyophilization of the appropriate fractions, 2.0 g of the *nor*-thioether (yield = 16%, HPLC purity >95%) and 5.2 g of the *epi*-thioether (yield = 40%, HPLC purity *ca.* 85%) as the trifluoroacetate salts. *Nor*-thioether: ¹H NMR (400 MHz, CD₃OD) δ 1.14 (d, J=6.2 Hz, 3H), 2.83 (m, 2H), 5.44 (d, J=1.8 Hz, 1H); FAB-MS (Li) m/z 1131 (M+H+Li)⁺. *Epi*-thioether: ¹H NMR (400 MHz, CD₃OD) δ 1.34 (d, J=6.3 Hz, 3H), 2.89 (m, 2H), 4.72 (d, J=4.9 Hz, 1H); FAB-MS (Li) m/z 1131 (M+H+Li)⁺.

20 Part B: Preparation of Sulfone

In a manner similar to that described in Example 1, Part B, the *epi*-sulfone was prepared from the *epi*-thioether.

Part C: Preparation of Nitrile

25 A solution of the *epi*-sulfone (1.0 g) in 79 ml of 0.5M lithium cyanide in N,N-dimethylformamide was stirred at 25°C for a period of 10 minutes. HPLC analysis [RP-C18, 50% CH₃CN/H₂O (0.1% CF₃COOH)] of the reaction mixture indicated complete conversion to two less polar products. The reaction mixture was diluted with water (240 ml) and the resulting solution was loaded onto a reverse-phase flash column (C18, 20 g) packed in 10% CH₃CN/H₂O. Elution with 20-70% CH₃CN/H₂O in 10% step-gradients collecting 100 ml at each step followed by lyophilization of the product-containing fractions gave 610 mg of crude nitriles. Reverse-phase HPLC of this mixture (C18, 45-

- 31 -

55% CH₃CN/H₂O in 5% step-gradients) gave, after lyophilization of the appropriate fractions, 87 mg (yield = 10%, HPLC purity @ 210 nm = 97%) of the *nor*-nitrile and 190 mg (yield = 22%, HPLC purity @ 210 nm = 99%) of the *epi*-nitrile as white amorphous solids. *Nor*-nitrile: ¹H NMR (500MHz, CD₃OD) δ 1.14 (d, J=6.2 Hz, 3H), 1.59 (m, 2H) 1.93 - 2.08 (m, 3H), 2.15 - 2.27 (m, 5H), 2.43 (m, 1H), 2.47 (dd, J=9.5 and 15.4 Hz, 1H), 2.74 (dd, J=3.8 and 15.4 Hz, 1H), 3.78 (m, 2H), 3.97 (m, 2H), 4.18 (m, 1H), 4.39 (dd, J=4.4 and 12.8 Hz, 1H), 4.55 (m, 3H), 4.98 (m, 2H), 5.07 (d, J=4.1 Hz, 1H), 6.74 (d, J=8.5 Hz, 2H), 7.12 (d, J=8.5 Hz, 2H); ESI-MS (M+H)⁺ = 1074.5. *Epi*-nitrile: ¹H NMR (500MHz, CD₃OD) δ 1.59 (m, 2H), 1.76 (m, 1H), 1.98 (m, 1H), 2.07 (m, 2H), 2.22 (m, 3H), 2.39 (dd, J=7.4 and 13.2 Hz, 1H), 2.45 (dd, J=8.0 and 15.1 Hz, 1H), 2.57 (dd, J=5.4 and 15.1 Hz, 1H), 4.02 (m, 1H), 4.07 (d, J=4.6 Hz, 1H), 4.31 (dd, J=1.9 and 7.9 Hz, 1H), 4.36 (m, 4H), 4.55 (m, 3H), 4.63 (dd, J=7.4 and 10.6 Hz), 5.04 (d, J=3.4 Hz), 6.76 (d, J=8.5 Hz, 2H), 7.14 (d, J=8.5 Hz, 2H); ESI-MS (M+H)⁺ = 1074.4.

EXAMPLE 4

- 32 -

In a manner similar to that described in Example 2, the *nor*-nitrile from Example 3 was reduced to the amine shown above. Yield = 44% (CF₃COOH salt). ¹H NMR of hydrochloride salt (500MHz, CD₃OD) δ 1.16 (d, J=6.2 Hz, 3H), 1.9 - 2.1 (m, 3H), 2.23 (m, 4H),
 5 2.42 (dd, J=6.6 and 12.6 Hz, 1H), 2.48 (dd, J=9.4 and 15.4 Hz, 1H), 2.75 (dd, J=3.7 and 15.4 Hz, 1H), 3.15 (d, J = 5.7Hz, 2H), 3.80 (m, 2H), 3.96 (m, 2H), 4.06 (m, 1H), 4.17 (m, 1H), 4.23 (dd, J = 1.4 and 7.8 Hz, 1H), 4.57 (m, 4H), 5.00 (d, J=3.4 Hz, 1H), 5.06 (d, J=5.0 Hz, 1H), 6.74 (d, J=8.6 Hz, 2H), 7.12 (d, J=8.6 Hz, 2H); ESI-MS m/z 1078.7 (M+H)⁺,
 10 531.1 (M-H₂O+H)⁺⁺.

EXAMPLE 5

To a stirred solution of the amine trifluoroacetate from Example 4 (153 mg, 0.128 mmol) and 1N sodium hydroxide (130 μl, 0.130 mmol) in water (5 ml) and N,N-dimethylformamide (5 ml) is added

- 33 -

ethylacetimidate hydrochloride (160 mg, 1.29 mmol). After a period of 18 h at pH 8.5, trifluoroacetic acid is added to pH 7. Reverse-phase (C18) flash column chromatography of the neutralized reaction mixture, eluting with acetonitrile/water, is followed by lyophilization of the product-containing fractions. Preparative reverse-phase (C18) HPLC of this material, eluting with acetonitrile/water (0.1% CF₃COOH), is followed by lyophilization of the product-containing fractions to give the acetamidine as the trifluoroacetate salt: C₅₅H₈₇F₃N₁₀O₁₈, formula weight = 1233.36.

EXAMPLE 6

In a manner similar to that described in Example 5, bisamine from Example 2 is converted to the bisacetamidine shown above: C₅₉H₉₃F₆N₁₁O₁₉, formula weight = 1374.45.

- 34 -

EXAMPLE 7

5

10

15

20

(SEQ ID No. 3)

To a stirred solution of the amine trifluoroacetate from Example 4 (163 mg, 0.137 mmol) and 1M sodium bicarbonate (150 μ l, 0.150 mmol) in absolute methanol (5 ml) is added aminoiminomethanesulfonic acid (30 mg, 0.242 mmol). After a period of 1.5 h, the solvent is removed *in vacuo*. Preparative reverse-phase HPLC (C18) of the residue, eluting with acetonitrile/water (0.1% trifluoroacetic acid), is followed by lyophilization of the product-containing fractions to give the guanidine trifluoroacetate: C₅₄H₈₆F₃N₁₁O₁₈, formula weight = 1234.35.

- 35 -

EXAMPLE 8

In a manner similar to that described in Example 7, bisamine from Example 2 is converted to the bisguanidine shown above: C₅₇H₉₁F₆N₁₃O₁₉, formula weight = 1376.43.

- 36 -

EXAMPLE 9

20 To a stirred solution of the amine trifluoroacetate from Example 4 (149 mg, 0.125 mmol) in N,N-dimethylformamide (10 ml) and 1M sodium bicarbonate (2 ml, 2 mmol) is added iodomethane (2 ml, 32.1 mmol). The reaction mixture is stirred for a period of 18 h. The mixture is diluted with water (2X) and chromatographed. Reverse-phase

25 (C18) flash column chromatography eluting with acetonitrile/water is followed by lyophilization of the product-containing fractions to provide the trimethylammonium iodide: C₅₄H₉₀IN₉O₁₆, formula weight = 1248.27.

30

- 37 -

EXAMPLE 10

20 In a manner similar to that described in Example 9, bisamine
from Example 2 is converted to the bistrimethylammonium iodide
shown above: C₅₇H₉₉I₂N₉O₁₅, formula weight = 1404.28.

25

30

- 38 -

EXAMPLE 11Part A: Preparation of CBZ-Glyamide

The amine trifluoroacetate from Example 4 (215 mg, 0.180 mmol) is dissolved in N,N-dimethylformamide (2 ml). To this solution 1M sodium bicarbonate (200 μ l, 0.200 mmol) and pentafluorophenyl N-benzyloxycarbonylglycinate (106 mg, 0.270 mmol) is added. After 1 h, the reaction mixture is diluted with water (2X). Isolation by reverse-phase (C18) flash column chromatography eluting with acetonitrile/water gives, after lyophilization of the product-containing fractions, the N-CBZ glyamide: C₆₁H₉₂N₁₀O₁₉, formula weight = 1269.47.

Part B: Deprotection

A solution of the N-CBZ glyamide from Part A in glacial acetic acid is hydrogenated under balloon pressure in the presence of 10%

- 39 -

Pd/C for a period of 1.5 hours. The reaction mixture is filtered to remove the catalyst and the filtrate is lyophilized to give the glyamide as the acetate salt: C₅₅H₉₀N₁₀O₁₉, formula weight = 1195.39.

5

EXAMPLE 12Part A. Preparation of the Deacylating Enzyme

25 *P. acidovorans* ATCC 53942, maintained on Luria-Bertani medium agar slants was used to produce the deacylation enzyme.

A seed culture was prepared by inoculating a 50-ml portion of Luria-Bertani medium in a 250 ml flask with a loopful of the bacterium and the culture was incubated for about 24 hours at 27°C with constant shaking. Cells for the deacylation were grown by inoculating 15 liters of Luria-Bertani medium in a stirred fermentor with 30 ml of the seed culture and incubating with agitation of 400 rpm and aeration at 7.5 liters/min. at 28°C for 20 to 24 hours. The cells were washed with 50 mM potassium phosphate buffer, pH 7.5 and resuspended in about 4

30

- 40 -

liters of the same buffer. The suspension was equilibrated to 37°C to obtain the deacylating enzyme.

Part B. Deacylation

- 5 The bisamine from Example 2.(3.5 g) is dissolved in 900 ml of distilled water and added slowly over a 1 hour period to 2 liters of the suspension of *P. acidovorans* cells from Part A. The resulting mixture is maintained at 37°C while stirring at about 300 rpm without aeration. After 24 hours, the deacylation mixture is cleared of *P. acidovorans* cells by centrifugation and the nucleus is isolated from the supernatant by C18-high pressure liquid chromatography. Elution with 0-2% CH₃CN/H₂O containing 0.1% CF₃COOH in 0.5% step gradients is followed by lyophilization of the nucleus-containing fractions to give the deacylated product shown above as the tristrifluoroacetate salt:
- 15 C₄₁H₅₈F₉N₉O₂₀, formula weight=1167.95.

EXAMPLE 13

- 41 -

Part A: Selective Protection and Reacylation of the Nucleus

To a stirred solution of the nucleus (102 mg, 0.087 mmol) from Example 12 and benzyl 4-nitrophenylcarbonate (47.4 mg, 0.173 mmol) in anhydrous N,N-dimethylformamide (3.5 ml) is added triethylamine (48.4 μ l, 0.347 mmol). The reaction mixture is stirred for a period of 1 hour. 4-(*n*-Pentoxyphenyl)-4'-pentafluorophenoxybiphenyl (46 mg, 0.087 mmol) prepared as described in Preparation of Starting Materials is added and stirring is continued for a period of 60 hours. The reaction mixture is diluted with water (3.5 ml) and the product is isolated by C18 solid-phase extraction eluting initially with CH₃CN/H₂O and then CH₃OH. Concentration of the product-containing CH₃OH fractions as determined by analytical HPLC gives crude bis-CBZ pentoxyterphenyl intermediate: C₇₅H₈₉N₉O₂₀, molecular weight=1436.59.

Part B. Deprotection

A solution of the crude bis-CBZ terphenyl intermediate from Part A in methanol (10 ml) and glacial acetic acid (4 ml) is hydrogenated under balloon pressure in the presence of 10% Pd/C for a period of 1.75 hours. The reaction mixture is filtered through a bed of diatomaceous earth to remove the catalyst, rinsing with MeOH. The filtrate is concentrated *in vacuo*. Preparative C18-HPLC of the residue, loaded in mobil phase containing sufficient CH₃OH to fully solubilize, eluting with CH₃CN/H₂O containing 0.1% CF₃COOH is followed by lyophilization of the product-containing fractions as determined by analytical HPLC to give the pentoxyterphenyl compound shown above as the bistrifluoroacetate salt: C₆₃H₇₉F₆N₉O₂₀, formula weight=1396.37.

30

- 42 -

EXAMPLE 14**Part A: Selective Protection and Reacylation of the Nucleus**

20 To a stirred solution of the nucleus (102 mg, 0.087 mmol) from Example 12 and benzyl 4-nitrophenylcarbonate (47.4 mg, 0.173 mmol) in anhydrous N,N-dimethylformamide (3.5 ml) is added triethylamine (48.4 μ l, 0.347 mmol). The reaction mixture is stirred for a period of 1 hour. Pentafluorophenyl 6-octyloxy-2-naphthoate (39 mg, 0.087

25 mmol) prepared as described in Preparation of Starting Materials is added and stirring is continued for a period of 60 hours. The reaction mixture is diluted with water (3.5 ml) and the product is isolated by C18 solid-phase extraction eluting initially with CH₃CN/H₂O and then CH₃OH. Concentration of the product-containing CH₃OH fractions as

30 determined by analytical HPLC gives crude bis-CBZ octyloxynaphthoyl intermediate: C₇₀H₈₉N₉O₂₀, molecular weight=1376.54.

Part B. Deprotection

A solution of the crude bis-CBZ octyloxynaphthoyl intermediate from Part A in methanol and glacial acetic acid (2.5:1) is hydrogenated

- 43 -

under balloon pressure in the presence of 10% Pd/C for a period of 1.75 hours. The reaction mixture is filtered through a bed of diatomaceous earth to remove the catalyst, rinsing with MeOH. The filtrate is concentrated *in vacuo*. Preparative C18-HPLC of the residue,
5 loaded in mobil phase containing sufficient CH₃OH to fully solubilize, eluting with CH₃CN/H₂O containing 0.1% CF₃COOH is followed by lyophilization of the product-containing fractions as determined by analytical HPLC to give the octyloxynaphthoyl compound shown above as the bistrifluoroacetate salt: C₅₈H₇₉F₆N₉O₂₀, formula
10 weight=1336.32.

EXAMPLE 15

Part A: Alkylation

To a vigorously stirred solution of the amine trifluoroacetate from Example 4 (149 mg, 0.125 mmol) and N,N-diisopropylethylamine (16.2 mg, 0.125 mmol) in N,N-dimethylformamide (10 ml) is added

- 44 -

dropwise a solution of 2-(benzyloxycarbonyl)-aminoethyl bromide (32.3 mg, 0.125 mmol) in N,N-dimethylformamide (5 ml). The reaction mixture is stirred until C18 HPLC analysis with CH₃CN/H₂O indicates complete consumption of starting material. The mixture is
5 diluted with water and chromatographed. Reverse-phase (C18) flash column chromatography eluting with CH₃CN/H₂O (0.1% CF₃COOH) is followed by lyophilization of the product-containing fractions to provide the (benzyloxycarbonyl)-aminoethyl intermediate: C₆₁H₉₄N₁₀O₁₈, formula weight = 1255.49.

10

Part B: Deprotection

A solution of the CBZ protected intermediate from Part A in glacial acetic acid is hydrogenated under balloon pressure in the presence of 10% Pd/C for a period of 1.5 hours. The reaction mixture
15 is filtered to remove the catalyst and the filtrate is lyophilized. Preparative C18 HPLC of the lyophilizate eluting with CH₃CN/H₂O (0.1% CF₃COOH) provides the bisamine shown above as the ditrifluoroacetate salt: C₅₇H₉₀F₆N₁₀O₂₀, formula weight = 1349.40.

20

25

30

- 45 -

EXAMPLE 16

A suspension of the bisamine ditrifluoroacetate from Example 15 (169 mg, 0.125 mmol) in anhydrous tetrahydrofuran (10 ml) is cooled to 0-4°C. Neat BH₃·S(CH₃)₂ (107 mg, 1.41 mmol) is added slowly. The resulting reaction mixture is stirred at *ca.* 0°C for a period of 4h. The mixture is slowly quenched with 2N HCl (352 µl) and diluted with water. Preparative C18 HPLC of this solution eluting with CH₃CN/H₂O (0.1% CF₃COOH) followed by lyophilization of the product-containing fractions provides the trisamine shown above as the tris(trifluoroacetate) salt: C₅₉H₉₃F₉N₁₀O₂₁, formula weight = 1449.44.

- 46 -

EXAMPLE 17Part A: Preparation of CBZ Protected Amine

To a stirred solution of the starting amine trifluoroacetate from Example 1 (92 mg, 0.087 mmol) and benzyl 4-nitrophenyl carbonate (26.1 mg, 0.095 mmol) in anhydrous N,N-dimethylformamide (3.5 ml) is added triethylamine (24.3 μ l, 0.174 mmol). The reaction mixture is stirred until C18-HPLC analysis indicates complete consumption of starting material. The reaction mixture is diluted with water (3.5 ml) and the product is isolated by C18 solid-phase extraction eluting initially with CH₃CN/H₂O and then CH₃OH. Concentration of the product-containing CH₃OH fractions as determined by analytical HPLC gives crude CBZ intermediate: C₅₉H₈₇N₉O₁₇, formula weight=1194.4.

- 47 -

Part B: Reduction of Nitrile

In a manner similar to that described in Example 2, the nitrile from Part A is reduced and the amine product is isolated as the trifluoroacetate salt: C₆₁H₉₂F₃N₉O₁₉, formula weight = 1312.46.

Part C: Preparation of the CBZ-Protected Glyamide

In a manner similar to that described in Example 11, Part A, the amine from Part B above is converted to a CBZ-protected glyamide derivative: C₆₉H₁₀₀N₁₀O₂₀, formula weight = 1389.62.

Part D: Deprotection

In a manner similar to that described in Example 11, Part B, deprotection of the intermediate from Part C provides the glyamide derivative shown above as the diacetate salt. Purification by preparative C18-HPLC eluting with CH₃CN/H₂O (0.1% CF₃COOH) provides the ditrifluoroacetate salt: C₅₇H₉₀F₆N₁₀O₂₀, formula weight = 1349.4.

EXAMPLE 18

- 48 -

Part A: Preparation of Guanidine

To a stirred solution of the starting amine trifluoroacetate from Example 1 (145 mg, 0.137 mmol) and 1M sodium bicarbonate (150 μ l, 0.150 mmol) in absolute methanol (5 ml) is added aminoiminomethanesulfonic acid (30 mg, 0.242 mmol). After a period of 1.5 h, the solvent is removed *in vacuo*. Preparative reverse-phase HPLC (C18) of the residue, eluting with acetonitrile/water (0.1% trifluoroacetic acid), is followed by lyophilization of the product-containing fractions to give the guanidine trifluoroacetate salt: C₅₄H₈₄F₃N₁₁O₁₇, formula weight = 1216.33.

Part B: Reduction of Nitrile

In a manner similar to that described in Example 2, the nitrile from Part A is reduced and the product shown above is isolated as the bistrifluoroacetate salt: C₅₆H₈₉F₆N₁₁O₁₉, formula weight = 1334.39.

The following non-limiting examples illustrate representative compositions containing the compounds of the invention.

COMPOSITION EXAMPLE A

1000 compressed tablets each containing 500 mg of the compound of Example 4 are prepared from the following formulation:

<u>Compound</u>	<u>Grams</u>
Compound of Example 4	500
Starch	750
Dibasic calcium phosphate, hydrous	5000
Calcium stearate	2.5

- 49 -

The finely powdered ingredients are mixed well and granulated with 10 percent starch paste. The granulation is dried and compressed into tablets.

5

EXAMPLE B

1000 hard gelatin capsules, each containing 500 mg of the compound are prepared from the following formulation:

10	<u>Compound</u>	<u>Grams</u>
	Compound of Example 4	500
	Starch	250
	Lactose	750
	Talc	250
15	Calcium stearate	10

A uniform mixture of the ingredients is prepared by blending and used to fill two-piece hard gelatin capsules.

20

EXAMPLE C

An aerosol composition may be prepared having the following formulation:

25		<u>Per Canister</u>
	Compound of Example 4	24 mg
	Lecithin NF Liquid Concd.	1.2 mg
	Trichlorofluoromethane, NF	4.026 g
	Dichlorodifluoromethane, NF	12.15 g

30

EXAMPLE D

250 milliliters of an injectible solution may be prepared by conventional procedures having the following formulation:

- 50 -

Dextrose	12.5 g
Water	250 ml
Compound of Example 4	400 mg

5

The ingredients are blended and thereafter sterilized for use.

PREPARATION OF STARTING MATERIALS:

10

Compounds where R^I is dimethyltridecyl and R_1 is OH, R_2 is H, R_3 is CH_2CONH_2 , R_4 is CH_3 and R_6 is OH may be produced by cultivating *Zalerion arboricola* ATCC 20868 in a nutrient medium containing mannitol as the primary source of carbon as described in U.S. Patent No. 5,021,341 issued June 4, 1991.

15

Compounds in which R_3 is H and R^I is 11-methyltridecyl may be produced by cultivating *Aspergillus sydowi* in nutrient medium as described in *J. Antibiotics* XL (No. 3) p.28 (1987).

20

Compounds in which R_3 is CH_3 and R^I is linoleyl may be produced by cultivating *Aspergillus nidulans* NRRL 11440 in nutrient medium as described in U.S. Patent No. 4,288,549 issued September 8, 1981.

25

Compounds in which R_3 is CH_2CN may be produced by the reaction of a compound having a carboxamide group in the corresponding position with excess cyanuric chloride in an aprotic solvent. Molecular sieves may be employed in this reaction. After completion of the reaction, the sieves, if employed, are removed, and the filtrate concentrated to obtain the nitrile compound as more fully described in U.S. Patent No. 5,348,940 issued September 20, 1994.

30

Compounds in which R_3 is $\text{CH}_2\text{CH}_2\text{NH}_2$ may be produced by either a chemical or catalytic reduction of the nitrile. It is conveniently carried out employing large molar excess of sodium borohydride with cobaltous chloride as more fully described in copending application Ser. No. 936,558 filed September 3, 1992.

- 51 -

Compounds in which R₃ is CH₂CH₂NH₂ may also be directly prepared from the carboxamide employing a large molar excess of diborane.

Compounds in which R₅ is OH or OSO₃H are described in
5 European Patent Applications 0 431 350 and 0 462 531 by Fujisawa
Pharmaceutical Co., Ltd.

Starting materials in which R^I is a different group from
that of the natural product may be obtained by deacylating the lipophilic
group of the natural product by subjecting the natural product in a
10 nutrient medium to a deacylating enzyme until substantial deacylation
occurs, said enzyme having first been obtained by cultivating a
microorganism of the family *Pseudomonadaceae* or *Actinoplanaceae*, as
described in Experientia 34, 1670 (1978) or U.S. Patent No. 4,293,482,
recovering the deacylated cyclopeptide, and thereafter acylating the
15 deacylated cyclopeptide by mixing together with an appropriate active
ester R^ICOX to obtain Compound A with the desired acyl group.

The active esters R^ICOX may be prepared by methods
known to the skilled chemist as illustrated in the following examples.
Although any active ester is appropriate, the compounds are
20 illustrated with pentafluorophenyl esters.

Preparation of Alkoxy Terphenyl Side Chains

The terphenylcarboxylic acid esters may be prepared
through the following sequence of reactions, illustrated with a specific
25 example as follows:

30

- 52 -

A. Preparation of pentyloxy-substituted-terphenyl-carboxylic acid

5

(a)

10

(b)

15

(c)

20

(d)

25

(e)

30

- 53 -

Part A: 4-(4-n-Pentyloxyphenyl) bromobenzene

To a stirred solution of 25.5 g of 4-(4-bromophenyl)phenol (Compound (a)) in 400 mL of dimethylsulfoxide was added 40.9 mL of 2.5 N NaOH, followed by 12.7 mL of n-pentyl bromide, and the
5 resulting mixture heated at 70°C for 18 hours to obtain in the mixture, compound (b). The mixture was partitioned between 1000 mL of ethyl acetate and 500 mL water and from the organic phase after washing with water and brine, and drying was obtained 30.9 grams of Compound (b) as a white solid.

10 ¹H NMR (400MHz, DMSO-d₆) δ 0.93 (t, J=7.2 Hz, 3H), 1.41 (m, 4H), 1.79 (m, 2H), 3.97 (t, J=6.6 Hz, 2H), 6.94 (d, J=8.8 Hz, 2H), 7.39 (d, J=8.6 Hz, 2H), 7.45 (d, J=8.8 Hz, 2H), 7.51 (d, J=8.6 Hz, 2H).

15 **Part B:** 4-(4-n-Pentyloxyphenyl)phenylboronic acid

To a stirred suspension of 1.0 grams of Compound (b) in 20 mL anhydrous tetrahydrofuran at -78°C under a nitrogen atmosphere was added 1.32 mL of 2.5M n-butyl lithium in hexanes. After 15 minutes 0.760 mL of tri-isopropyl borate was added and the
20 stirring continued at -78°C for 15 minutes and then at 25°C for 40 minutes. The mixture was acidified and partitioned between ether and water to obtain the boronic acid compound (c) in the reaction mixture. The compound was recovered by washing with water and brine and drying to obtain 750 mg of 4-(4-n-pentyloxyphenyl) phenylboronic acid
25 as white solid with the following ¹H NMR.

¹H NMR (400MHz, DMSO-d₆) δ 0.89 (t, J=7.2 Hz, 3H), 1.38 (m, 4H), 1.72 (m, 2H), 3.99 (t, J=6.5 Hz, 2H), 6.99 (d, J=8.8 Hz, 2H), 7.57 (d, J=8.2 Hz, 2H), 7.60 (d, J=8.8 Hz, 2H), 7.83 (d, J=8.2 Hz, 2H).

30 **Part C:** Pentafluorophenyl 4''-(n-pentyloxy)-[1,1':4',1''-terphenyl]-4-carboxylate

To a stirred mixture of 1.0 g of the boronic acid and 0.0874 mL of 4-iodobenzoic acid in 11 mL ethanol and 30 mL toluene

- 54 -

was added 5.3 mL of a 2M aqueous solution of sodium carbonate followed by 204 mg tetrakis(triphenylphosphine)palladium and the reaction mixture heated under reflux (100°C) for 18 hours. Thereafter, the mixture was cooled, acidified and partitioned between ethyl acetate and water. The organic phase was washed with water and brine and dried, then filtered through a bed of celite to obtain after removal of solvent and purification with flash silica gel chromatography to obtain 4''-(n-pentyloxy)-[1,1':4',1''-terphenyl]-4-carboxylic acid.

¹H NMR (400MHz, DMSO-d₆) δ 0.89 (t, 3H), 1.37 (m, 4H), 1.72 (m, 2H), 3.98 (t, 2H), 7.01 (d, 2H).

To a mixture of 4''-(n-pentyloxy)-[1,1':4',1''-terphenyl]-4-carboxylic acid (10.5 mmol) and dicyclohexylcarbodiimide (10.5 mmol) in ethyl acetate at 0°C is added pentafluorophenol (11.5 mmol). The mixture is stirred at 25°C for a period of 18 h, producing a precipitate. The mixture is filtered. The filtrate is washed with water and brine and dried with magnesium sulfate. The solvent is removed *in vacuo* to obtain pentafluorophenyl 4''-(n-pentyloxy)-[1,1':4',1''-terphenyl]-4-carboxylate, C₃₀H₂₃F₅O₃, M.W.= 526.5.

Preparation of Alkoxy Biphenyl Side Chains

The biphenylcarboxylic acid esters may be obtained through the following sequence of reactions illustrated as follows:

- 55 -

A. Preparation of Octyloxybiphenylcarboxylic acid

5

10

15

The acid is prepared as described in EP 462531 by Fujisawa Pharmaceutical Co., Ltd.

20

B. Preparation of pentafluorophenyl Ester

25

Pentafluorophenol (11.5 mmol) is added at 0° to a mixture of 10.5 mmol 4'-n-octyloxy[1,1'-biphenyl]-4-ylcarboxylic acid and 10.5 mmol of dicyclohexylcarbodiimide in ethyl acetate. The mixture is stirred at 25°C for a period of 18 hours whereupon a precipitate is formed. The reaction mixture is filtered, the filtrate washed with water and brine and dried, the solvent removed *in vacuo* to obtain pentafluorophenyl 4'-n-octyloxy[1,1'-biphenyl]-4-ylcarboxylate, C₂₇H₂₅F₅O₃, M.W. 492.5.

30

- 56 -

Preparation of AminoethyloxyBiphenyl Side chainsPreparation of 4'-(2-[4-Cyclohexylmethylpiperidin-1-yl]ethoxy)-[1,1'-biphenyl]-4-ylcarboxylic acid, Pentafluorophenyl Ester

5

10 Part A: Preparation of 4-Cyclohexylmethylpiperidine

4-Benzylpiperidine is dissolved in glacial acetic acid containing PtO₂ (approximately 50 wt percent). A Paar hydrogenator is used and the reaction vessel is flushed with H₂ and pressurized to 3 atm. The mixture is shaken for sufficient time to give reduction of the aromatic ring to the fully saturated product which is determined by the uptake of 3 molar equivalents of H₂. The black solid is filtered and the acetic acid removed by evaporation under reduced pressure to obtain the product as an acetate salt.

20 Part B: Preparation of 1-(2-Hydroxyethyl)-4-cyclohexylmethylpiperidine

The product from Part A (1.0 eq) is dissolved in dichloromethane containing an equimolar amount of diisopropylethyl amine. Ethylene oxide (10 eq) is added and the mixture is stirred until starting material is consumed. The desired product is obtained by removal of the solvent *in vacuo* followed by purification by column chromatography.

30 Part C: Preparation of 4'-(2-[4-cyclohexylmethylpiperidine-1-yl]ethoxy)-[1,1'-biphenyl]-4-ylcarboxylic acid

4'-Hydroxy-[1,1'-biphenyl]-4-ylcarboxylic acid methyl ester (1.0 eq) is dissolved in dichloromethane and triphenylphosphine (1.3 eq) and the hydroxyethyl compound (1.0 eq) from Part B is added. Next, diethyl azodicarboxylate (1.3 eq) is added and the mixture is stirred

- 57 -

until starting material is consumed. The mixture is diluted with dichloromethane and washed with water. The organic layer is dried with MgSO_4 and filtered. The solvent is removed *in vacuo* and the residue is dissolved in ethanol. An excess of 3N sodium hydroxide is added and the mixture stirred for several hours. The reaction is neutralized with 2N HCl and is extracted with ethyl acetate. The ethyl acetate layer is dried with MgSO_4 , filtered and the solvent vaporized under reduced pressure. The desired product is obtained in substantially pure form by column chromatography.

Part D: Preparation of the Pentafluorophenyl Ester

The carboxylic acid (1.0 eq) and dicyclohexylcarbodiimide (1.0 eq) are dissolved in ethyl acetate and the solution is cooled to 0°C . Pentafluorophenol (1.05 eq) is added, the ice bath then is removed and the reaction stirred at ambient temperature for 18-24 h. An equal volume of ether is added, the mixture is filtered and the solvent removed *in vacuo*. The product (MW = 587.64) may be obtained in a sufficiently pure form to be utilized for nucleus acylation.

20 Preparation of 4'-(2-[4-Undecylpiperizin-1-yl]-ethoxy)[1,1'-biphenyl]-4-ylcarboxylic acid, Pentafluorophenyl Ester

Part A: Preparation of 4-Undecylpiperazine

Excess piperazine (5 eq) and 1-bromoundecane (1.0 eq) are dissolved in dichloromethane and allowed to react overnight. The mixture is extracted with aqueous sodium bicarbonate and the organic layer dried with sodium sulfate. The mixture is filtered, the solvent removed *in vacuo* and the residue purified by column chromatography.

- 58 -

Part B: Preparation of 1-(2-Hydroxyethyl)-4-undecylpiperazine

The substituted piperazine above (1.0 eq) is dissolved in n-propanol and bromoethanol (1.0 eq) is added along with diisopropylethyl amine (1.1 eq). After several hours, the solvent is removed *in vacuo* and the residue dissolved in dichloromethane. The organic layer is washed with water and then aqueous sodium bicarbonate. The organic layer is dried with MgSO_4 and filtered. Removal of the solvent *in vacuo* is followed by purification by column chromatography.

Part C: Preparation of the Carboxylic Acid

The procedure is essentially the same as describe in Part C above except that the hydroxyethyl piperazine from above is substituted for the hydroxyethyl piperidine.

Part D: Preparation of the Pentafluorophenyl Ester

The procedure is identical to Part D from above except that piperazinyl-substituted-biphenyl carboxylic acid is used. The product (MW = 646.75) may be obtained in a sufficiently pure form to be utilized "as is" in nucleus acylation.

Preparation of Pentafluorophenyl 6-Octyloxy-2-naphthoate

25

To a suspension of 6-octyloxy-2-naphthoic acid (3.15 g, 10.5 mmol) and dicyclohexylcarbodiimide in ethyl acetate (25 ml) at 0°C was added pentafluorophenol (2.12 g, 11.5 mmol). The mixture was stirred at 25°C for a period of 18 h. The precipitate was removed by filtration. The filtrate was washed with water (2x150 ml) and brine and dried with magnesium sulfate. Removal of the ethyl acetate *in vacuo* gave 5.4 g of pentafluorophenyl 6-octyloxy-2-naphthoate as a solid: ^1H NMR (400 MHz, CD_3OD) δ 0.88 (t, 3, J = 6.9 Hz), 4.10 (t, 2, J = 6.6 Hz), 7.16 (d, 1), 7.21 (d, 1), 7.80 (d, 1), 7.87 (d, 1), 8.08 (dd, 1), 8.69 (d, 1).

(2) INFORMATION FOR SEQ ID NO:6:

- (i) SEQUENCE CHARACTERISTICS:
 (A) LENGTH: 6 amino acids
 (B) TYPE: amino acid
 (C) STRANDEDNESS: unknown
 (D) TOPOLOGY: circular

(ii) MOLECULE TYPE: peptide

(xi) SEQUENCE DESCRIPTION: SEQ ID NO:6:

Xaa Ser Xaa Xaa Xaa Xaa
1 5

(2) INFORMATION FOR SEQ ID NO:7:

- (i) SEQUENCE CHARACTERISTICS:
 (A) LENGTH: 6 amino acids
 (B) TYPE: amino acid
 (C) STRANDEDNESS: unknown
 (D) TOPOLOGY: circular

(ii) MOLECULE TYPE: peptide

(xi) SEQUENCE DESCRIPTION: SEQ ID NO:7:

Xaa Thr Xaa Xaa Ser Xaa
1 5

(2) INFORMATION FOR SEQ ID NO:8:

- (i) SEQUENCE CHARACTERISTICS:
 (A) LENGTH: 6 amino acids
 (B) TYPE: amino acid

- 62 -

- (C) STRANDEDNESS: unknown
- (D) TOPOLOGY: circular

(ii) MOLECULE TYPE: peptide

(xi) SEQUENCE DESCRIPTION: SEQ ID NO:8:

Xaa Thr Xaa Xaa Thr Xaa
1 5

(2) INFORMATION FOR SEQ ID NO:9:

- (i) SEQUENCE CHARACTERISTICS:
 - (A) LENGTH: 6 amino acids
 - (B) TYPE: amino acid
 - (C) STRANDEDNESS: unknown
 - (D) TOPOLOGY: circular

(ii) MOLECULE TYPE: peptide

(xi) SEQUENCE DESCRIPTION: SEQ ID NO:9:

Xaa Thr Xaa Xaa Xaa Xaa
1 5

(2) INFORMATION FOR SEQ ID NO:10:

- (i) SEQUENCE CHARACTERISTICS:
 - (A) LENGTH: 6 amino acids
 - (B) TYPE: amino acid
 - (C) STRANDEDNESS: unknown
 - (D) TOPOLOGY: circular

(ii) MOLECULE TYPE: peptide

(xi) SEQUENCE DESCRIPTION: SEQ ID NO:10:

Xaa Ser Xaa Xaa Ser Xaa
1 5

(2) INFORMATION FOR SEQ ID NO:11:

- (i) SEQUENCE CHARACTERISTICS:
 - (A) LENGTH: 6 amino acids
 - (B) TYPE: amino acid
 - (C) STRANDEDNESS: unknown
 - (D) TOPOLOGY: circular

(ii) MOLECULE TYPE: peptide

- 63 -

(xi) SEQUENCE DESCRIPTION: SEQ ID NO:11:

Xaa Ser Xaa Xaa Thr Xaa
1 5

(2) INFORMATION FOR SEQ ID NO:12:

- (i) SEQUENCE CHARACTERISTICS:
(A) LENGTH: 6 amino acids
(B) TYPE: amino acid
(C) STRANDEDNESS: unknown
(D) TOPOLOGY: circular

(ii) MOLECULE TYPE: peptide

(xi) SEQUENCE DESCRIPTION: SEQ ID NO:12:

Xaa Ser Xaa Xaa Xaa Xaa
1 5

(2) INFORMATION FOR SEQ ID NO:13:

- (i) SEQUENCE CHARACTERISTICS:
(A) LENGTH: 6 amino acids
(B) TYPE: amino acid
(C) STRANDEDNESS: unknown
(D) TOPOLOGY: circular

(ii) MOLECULE TYPE: peptide

(xi) SEQUENCE DESCRIPTION: SEQ ID NO:13:

Xaa Thr Xaa Xaa Ser Xaa
1 5

(2) INFORMATION FOR SEQ ID NO:14:

- (i) SEQUENCE CHARACTERISTICS:
(A) LENGTH: 6 amino acids
(B) TYPE: amino acid
(C) STRANDEDNESS: unknown
(D) TOPOLOGY: circular

(ii) MOLECULE TYPE: peptide

(xi) SEQUENCE DESCRIPTION: SEQ ID NO:14:

- 64 -

Xaa Thr Xaa Xaa Thr Xaa
1 5

(2) INFORMATION FOR SEQ ID NO:15:

(i) SEQUENCE CHARACTERISTICS:

- (A) LENGTH: 6 amino acids
- (B) TYPE: amino acid
- (C) STRANDEDNESS: unknown
- (D) TOPOLOGY: circular

(ii) MOLECULE TYPE: peptide

(xi) SEQUENCE DESCRIPTION: SEQ ID NO:15:

Xaa Thr Xaa Xaa Xaa Xaa
1 5

(2) INFORMATION FOR SEQ ID NO:16:

(i) SEQUENCE CHARACTERISTICS:

- (A) LENGTH: 6 amino acids
- (B) TYPE: amino acid
- (C) STRANDEDNESS: unknown
- (D) TOPOLOGY: circular

(ii) MOLECULE TYPE: peptide

(xi) SEQUENCE DESCRIPTION: SEQ ID NO:16:

Xaa Ser Xaa Xaa Ser Xaa
1 5

(2) INFORMATION FOR SEQ ID NO:17:

(i) SEQUENCE CHARACTERISTICS:

- (A) LENGTH: 6 amino acids
- (B) TYPE: amino acid
- (C) STRANDEDNESS: unknown
- (D) TOPOLOGY: circular

(ii) MOLECULE TYPE: peptide

(xi) SEQUENCE DESCRIPTION: SEQ ID NO:17:

Xaa Ser Xaa Xaa Thr Xaa
1 5

(2) INFORMATION FOR SEQ ID NO:18:

- 65 -

- (i) SEQUENCE CHARACTERISTICS:
 (A) LENGTH: 6 amino acids
 (B) TYPE: amino acid
 (C) STRANDEDNESS: unknown
 (D) TOPOLOGY: circular

(ii) MOLECULE TYPE: peptide

(xi) SEQUENCE DESCRIPTION: SEQ ID NO:18:

Xaa Ser Xaa Xaa Xaa Xaa
1 5

(2) INFORMATION FOR SEQ ID NO:19:

- (i) SEQUENCE CHARACTERISTICS:
 (A) LENGTH: 6 amino acids
 (B) TYPE: amino acid
 (C) STRANDEDNESS: unknown
 (D) TOPOLOGY: circular

(ii) MOLECULE TYPE: peptide

(xi) SEQUENCE DESCRIPTION: SEQ ID NO:19:

Xaa Thr Xaa Xaa Ser Xaa
1 5

(2) INFORMATION FOR SEQ ID NO:20:

- (i) SEQUENCE CHARACTERISTICS:
 (A) LENGTH: 6 amino acids
 (B) TYPE: amino acid
 (C) STRANDEDNESS: unknown
 (D) TOPOLOGY: circular

(ii) MOLECULE TYPE: peptide

(xi) SEQUENCE DESCRIPTION: SEQ ID NO:20:

Xaa Thr Xaa Xaa Thr Xaa
1 5

(2) INFORMATION FOR SEQ ID NO:21:

- (i) SEQUENCE CHARACTERISTICS:
 (A) LENGTH: 6 amino acids
 (B) TYPE: amino acid
 (C) STRANDEDNESS: unknown
 (D) TOPOLOGY: circular

- 66 -

(ii) MOLECULE TYPE: peptide

(xi) SEQUENCE DESCRIPTION: SEQ ID NO:21:

Xaa Thr Xaa Xaa Xaa Xaa
1 5

(2) INFORMATION FOR SEQ ID NO:22:

- (i) SEQUENCE CHARACTERISTICS:
(A) LENGTH: 6 amino acids
(B) TYPE: amino acid
(C) STRANDEDNESS: unknown
(D) TOPOLOGY: circular

(ii) MOLECULE TYPE: peptide

(xi) SEQUENCE DESCRIPTION: SEQ ID NO:22:

Xaa Ser Xaa Xaa Ser Xaa
1 5

(2) INFORMATION FOR SEQ ID NO:23:

- (i) SEQUENCE CHARACTERISTICS:
(A) LENGTH: 6 amino acids
(B) TYPE: amino acid
(C) STRANDEDNESS: unknown
(D) TOPOLOGY: circular

(ii) MOLECULE TYPE: peptide

(xi) SEQUENCE DESCRIPTION: SEQ ID NO:23:

Xaa Ser Xaa Xaa Thr Xaa
1 5

(2) INFORMATION FOR SEQ ID NO:24:

- (i) SEQUENCE CHARACTERISTICS:
(A) LENGTH: 6 amino acids
(B) TYPE: amino acid
(C) STRANDEDNESS: unknown
(D) TOPOLOGY: circular

(ii) MOLECULE TYPE: peptide

WHAT IS CLAIMED IS:

1. A compound having the formula

- 20 wherein
- R₁ is H or OH;
- R₂ is H, CH₃ or OH;
- 25 R₃ is H, CH₃, CH₂CONH₂, CH₂CN, CH₂CH₂NR^{II}R^{III},
CH₂CH₂N(R^{IV})₃⁺X⁻ or CH₂CH₂NH(C = NH)R^{VII};
- R₄ is H or CH₃;
- 30 R₅ is H, OH or OSO₃H;
- R₆ is H or OH;
- R^I is C₉-C₂₁ alkyl,

- 69 -

C9-C21 alkenyl,
 C1-C10 alkoxyphenyl,
 C1-C10 alkoxy-naphthyl, or

5

wherein

10

R^a is

C1-C10 alkyl; or (CH₂)_qNR^bR^c wherein R^b and R^c are independently H, C1-C10 alkyl or R^b and R^c taken together with the nitrogen atom are

15

wherein

R^d is

C1-C16 alkyl, cyclohexylmethyl, phenyl or benzyl;

p is

1 or 2; and

20

q is

2, 3 or 4;

R^{II} is

H, C1-C4 alkyl, (CH₂)₂₋₄OH, C=NH(R^{VII}),
 (CH₂)₂₋₄NR^{VI}, (CH₂)₂₋₄N(R^{IV})₃+X⁻,
 (CH₂)₂₋₄NH(C=NH)R^{VII},
 (CH₂)₁₋₄CH(NR^{VI})(CH₂)₁₋₄NR^{VI},
 (CH₂)₂₋₄NR^V(CH₂)₂₋₄NR^{VI},
 CO(CH₂)₁₋₄NR^{VI}, COCH(NR^{VI})(CH₂)₁₋₄NR^{VI};

25

R^{III} is

H, C1-C4 alkyl, (CH₂)₂₋₄NR^{VI}, (CH₂)₂₋₄N(R^{IV})₃+X⁻,
 (CH₂)₂₋₄NH(C=NH)R^{VII},
 (CH₂)₁₋₄CH(NR^{VI})(CH₂)₁₋₄NR^{VI},
 (CH₂)₂₋₄NR^V(CH₂)₂₋₄NR^{VI}; or

30

R^{II} and R^{III} taken together are

- 70 -

-(CH₂)₄-, -(CH₂)₅-, -(CH₂)₂O(CH₂)₂-, or
 -(CH₂)₂NH(CH₂)₂-;

- 5 R^{IV} is C₁-C₄ alkyl;
 R^V is H or C₁-C₄ alkyl;
 R^{VI} is H or C₁-C₄ alkyl;
 10 R^{VII} is H, C₁-C₄ alkyl or NH₂;
 X is Cl, Br or I; or
 15 a pharmaceutically acceptable salt thereof.

2. A compound having the formula

- 71 -

- wherein
 R₁ is H or OH;
- 5 R₂ is H, CH₃ or OH;
- R₃ is H, CH₃, CH₂CONH₂, CH₂CN, CH₂CH₂NR^{II}R^{III},
 CH₂CH₂N(R^{IV})₃⁺X⁻ or CH₂CH₂NH(C = NH)R^{VII};
- 10 R₄ is H or CH₃;
- R₅ is H, OH or OSO₃H;
- R₆ is H or OH;
- 15 R^I is C₉-C₂₁ alkyl,
 C₉-C₂₁ alkenyl,
 C₁-C₁₀ alkoxyphenyl,
 C₁-C₁₀ alkoxynaphthyl, or

20

- 25 wherein
 R^a is C₁-C₁₀ alkyl; or (CH₂)_qNR^bR^c wherein R^b and R^c are
 independently H, C₁-C₁₀ alkyl or R^b and R^c taken together
 with the nitrogen atom are

30

- wherein
 R^d is C₁-C₁₆ alkyl, cyclohexylmethyl, phenyl or benzyl;
 p is 1 or 2;

- 72 -

q is 2, 3 or 4;
 R^{IV} is C_1 - C_4 alkyl; and
 X is Cl, Br or I.

5

3. The compound as defined in Claim 1 wherein

R_1 is OH;
 10 R_2 is H;
 R_3 is $CH_2CH_2NH_2$, $CH_2CH_2N(CH_3)_3^+I^-$, or
 $CH_2CH_2NH(C=NH)NH_2$;
 R_4 is CH_3 ;
 R_5 is H;
 15 R_6 is OH;
 R^I is 9,11-dimethyltridecyl;
 R^{II} is H, C_1 - C_4 alkyl, $(CH_2)_{2-4}OH$, $C=NH(R^{VII})$,
 $(CH_2)_{2-4}NR^{VRVI}$, $(CH_2)_{2-4}N(R^{IV})_3^+X^-$,
 $(CH_2)_{2-4}NH(C=NH)R^{VII}$,
 20 $(CH_2)_{1-4}CH(NR^{VRVI})(CH_2)_{1-4}NR^{VRVI}$,
 $(CH_2)_{2-4}NR^V(CH_2)_{2-4}NR^{VRVI}$,
 $CO(CH_2)_{1-4}NR^{VRVI}$, $COCH(NR^{VRVI})(CH_2)_{1-4}NR^{VRVI}$;
 and
 25 R^{III} is H, C_1 - C_4 alkyl, $(CH_2)_{2-4}NR^{VRVI}$, $(CH_2)_{2-4}N(R^{IV})_3^+X^-$,
 $(CH_2)_{2-4}NH(C=NH)R^{VII}$,
 $(CH_2)_{1-4}CH(NR^{VRVI})(CH_2)_{1-4}NR^{VRVI}$,
 $(CH_2)_{2-4}NR^V(CH_2)_{2-4}NR^{VRVI}$.

30

4. The compound as defined in claim 2 wherein

R_1 is OH;
 R_2 is H;

- 73 -

R₃ is CH₂CH₂NH₂, CH₂CH₂N(CH₃)₃⁺I⁻, or
CH₂CH₂NH(C=NH)NH₂;
R₄ is CH₃;
R₅ is H;
5 R₆ is OH;
R^I is 9,11-dimethyltridecyl;
R^{IV} is CH₃, and
X is I.

10

15

20

25

30

- 74 -

5. A compound having the formula

wherein

20 R₁ is H or OH;

R₂ is H, CH₃ or OH;

25 R₃ is H, CH₃, CH₂CONH₂, CH₂CN, CH₂CH₂NR^{II}R^{III},
CH₂CH₂N(R^{IV})₃⁺X⁻ or CH₂CH₂NH(C = NH)R^{VII};

R₄ is H or CH₃;

30 R₅ is H, OH or OSO₃H;

R₆ is H or OH;

R^{II} is H, C₁-C₄ alkyl, (CH₂)₂₋₄OH, C = NH(R^{VII}),
(CH₂)₂₋₄NR^{VI}R^{VI}, (CH₂)₂₋₄N(R^{IV})₃⁺X⁻,

- 75 -

$(\text{CH}_2)_{2-4}\text{NH}(\text{C}=\text{NH})\text{R}^{\text{VII}}$,
 $(\text{CH}_2)_{1-4}\text{CH}(\text{NR}^{\text{V}}\text{R}^{\text{VI}})(\text{CH}_2)_{1-4}\text{NR}^{\text{V}}\text{R}^{\text{VI}}$,
 $(\text{CH}_2)_{2-4}\text{NR}^{\text{V}}(\text{CH}_2)_{2-4}\text{NR}^{\text{V}}\text{R}^{\text{VI}}$,
 $\text{CO}(\text{CH}_2)_{1-4}\text{NR}^{\text{V}}\text{R}^{\text{VI}}$, $\text{COCH}(\text{NR}^{\text{V}}\text{R}^{\text{VI}})(\text{CH}_2)_{1-4}\text{NR}^{\text{V}}\text{R}^{\text{VI}}$;

5

R^{III} is H, C_1 - C_4 alkyl, $(\text{CH}_2)_{2-4}\text{NR}^{\text{V}}\text{R}^{\text{VI}}$, $(\text{CH}_2)_{2-4}\text{N}(\text{R}^{\text{IV}})_3^+\text{X}^-$,
 $(\text{CH}_2)_{2-4}\text{NH}(\text{C}=\text{NH})\text{R}^{\text{VII}}$,
 $(\text{CH}_2)_{1-4}\text{CH}(\text{NR}^{\text{V}}\text{R}^{\text{VI}})(\text{CH}_2)_{1-4}\text{NR}^{\text{V}}\text{R}^{\text{VI}}$,
 $(\text{CH}_2)_{2-4}\text{NR}^{\text{V}}(\text{CH}_2)_{2-4}\text{NR}^{\text{V}}\text{R}^{\text{VI}}$; or

10

R^{II} and R^{III} taken together are
 $-(\text{CH}_2)_4-$, $-(\text{CH}_2)_5-$, $-(\text{CH}_2)_2\text{O}(\text{CH}_2)_2-$, or
 $-(\text{CH}_2)_2\text{NH}(\text{CH}_2)_2-$;

15

R^{IV} is C_1 - C_4 alkyl;

R^{V} is H or C_1 - C_4 alkyl;

20

R^{VI} is H or C_1 - C_4 alkyl;

R^{VII} is H, C_1 - C_4 alkyl or NH_2 ;

25 X is Cl, Br or I; or

a pharmaceutically acceptable salt thereof.

30

- 76 -

6. The compound as defined in Claim 1 having the formula

or a pharmaceutically acceptable salt thereof.

- 77 -

7. The compound as defined in Claim 1 having the formula

or a pharmaceutically acceptable salt thereof.

- 78 -

8. The compound as defined in Claim 1 having the formula

or a pharmaceutically acceptable salt thereof.

- 79 -

9. The compound as defined in Claim 2 having the formula

- 80 -

10. The compound as defined in Claim 1 having the formula

or a pharmaceutically acceptable salt thereof.

- 81 -

11. The compound as defined in Claim 1 having the formula

20 or a pharmaceutically acceptable salt thereof.

25

30

- 82 -

12. The compound as defined in Claim 5 having the formula

13. An antifungal composition comprising an effective amount of a compound as defined in Claim 1 and a pharmaceutically acceptable carrier therefor.

14. A composition according to Claim 12 in unit dosage form wherein the compound of Claim 1 is present in an amount of 10 mg to 200 milligrams.

15. A method for treating fungal infections which comprises administering to a patient in need of said treatment a therapeutic amount of a compound as defined in Claim 1.

16. A method for treating fungal infections caused by *Candida sp.* which comprises administering to a patient in need of said treatment a therapeutic amount of a compound as defined in Claim 1.

- 83 -

17. A method for treating fungal infections caused by *Aspergillus sp.* which comprises administering to a patient in need of said treatment a therapeutic amount of a compound as defined in Claim 1.

18. A method for treating a *Pneumocystis carinii* infection which comprises administering to a patient needing said treatment a therapeutic amount of a compound as defined in Claim 1.

19. A method of preventing a *Pneumocystis carinii* infection in a patient which comprises administering to said patient a prophylactic amount of a compound as defined in Claim 1.

INTERNATIONAL SEARCH REPORT

International application No.
PCT/US96/00921

A. CLASSIFICATION OF SUBJECT MATTER

IPC(6) : A61K 38/00

US CL : 514/9, 10, 11; 530/317, 318

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)

U.S. : 514/9, 10, 11; 530/317, 318

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X	US, A, 5,166,135 (SCHMATZ) 24 November 1992, column 1, lines 14-40, column 2, lines 43-69, column 3, lines 21-45, column 14, lines 15-23.	1-19

☐ Further documents are listed in the continuation of Box C. ☐ See patent family annex.

Special categories of cited documents:	
A document defining the general state of the art which is not considered to be of particular relevance	*T* later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
E earlier document published on or after the international filing date	*X* document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
L document which may throw doubt on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)	*Y* document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
O document referring to an oral disclosure, use, exhibition or other means	*Z* document member of the same patent family
P document published prior to the international filing date but later than the priority date claimed
